

EVOKE TAPWARE RANGE

INSTALLATION, PRODUCT CARE & WARRANTY

BATH SPOUT - ET6114

Thank you for purchasing Newtech Tapware.

Your Newtech Tapware has been crafted using high quality durable stainless steel and will have a long lasting and productive life, provided it is used in accordance with manufacturers general conditions.

Your Newtech Tapware must be installed by a registered plumber.

CARE OF YOUR NEWTECH TAPWARE

To clean, use water with a soft damp cloth. Any harsh scrubbing or scratching of the product surface is strictly prohibited, same to the use of any cleaning products which contain acid or any corrosive agents.

WARRANTY

For all warranty information please refer to www.newtech.co.nz/warranty.

INSTALLATION

For pressure exceeding 5 bar/500kPa, install a pressure reducing valve. If a system is required to be pressure tested the water supply to the mixer must be capped off prior to testing. If a mixer has been subjected to pressures over 5 bar/500kPa then a new cartridge must be installed, at the installers/owners expense for warranty to be valid.

Thoroughly flush all pipes to eliminate any remaining dirt and residue and install inline filters and ensure water temperature does not exceed 65°C and pressure does not exceed 5 bar/500kPa. Turn off water supply before installation and check for leaks after every installation. Failure to do so may void warranty.
